WISCONSIN IID PREPARATION

Elite Specialty Automotive | 608-249-2860

STEP-BY-STEP LICENSE ROADMAP

- [ ] **1. Review your court order and DMV record**
  Confirm your IID restriction, license revocation period, vehicle exemptions, and eligibility for an occupational or regular license. Important: Your IID restriction period generally begins when you obtain an occupational license or reinstate your regular license, not simply when a device is installed.
- [ ] **2. Contact your approved county IDP assessment agency**
  Following an OWI conviction, Wisconsin generally requires you to contact your county-approved Intoxicated Driver Program assessment agency within 72 hours. Your appointment may occur later.
- [ ] **3. Complete your assessment and Driver Safety Plan**
  Your assessor determines which education, counseling, or treatment applies. A particular school or program is not universally required. Your plan generally must be completed within one year of assessment; ask the assessor in advance about any available extension.
- [ ] **4. Check whether you need SR-22 insurance**
  An occupational license requires an SR-22 certificate. Regular reinstatement requirements vary. Confirm with WisDOT and your insurance provider.
- [ ] **5. Confirm which vehicles need an IID**
  Wisconsin generally requires IIDs in vehicles titled or registered to a restricted driver, subject to applicable court exemptions and vehicle-type exceptions. Discuss every vehicle you own or register with the court or DMV.
- [ ] **6. Choose your ignition interlock provider**
  Elite Specialty Automotive installs and services Intoxalock, LifeSafer, and Low Cost Interlock. Call 608-249-2860 to discuss compatibility, scheduling, and estimated costs. Confirm any provider restrictions with your supervising authority.
- [ ] **7. Complete IID installation and keep the records**
  Your installer transmits installation information to WisDOT. Save receipts and paperwork. Installation alone does not authorize driving.
- [ ] **8. Allow time for DMV processing**
  WisDOT advises waiting at least one business day after installation before visiting a DMV service center for an occupational license. Verify eligibility and required documentation.
- [ ] **9. Prepare the correct license application**
  For an occupational license, review forms MV3001 and MV3027, SR-22, identification, fees, tests, and permitted driving hours. Regular-license reinstatement follows different requirements.
- [ ] **10. Obtain your license before driving**
  Do not drive until the DMV has issued the appropriate occupational license or reinstated your regular driving privileges. Follow all conditions and restrictions.
- [ ] **11. Maintain IID service and safety-plan compliance**
  Keep service appointments and complete required programs. Verify your official IID restriction end date with WisDOT before requesting removal.

VERIFY REQUIREMENTS WITH WISDOT AND YOUR COURT

General guidance only, not official DMV instructions or legal advice. Requirements differ by case.
